Coub is a great solution for all Youtube looping needs. Coub is like Youtube re-compile. First time used Coub, it took over 3-4 hours. But after using it for 4-5 months, I found this amazing performance of Coub. Now if you click to Play, the video will re-compile and play, it's so fast! If you want to learn more about Coub, click to Play button. How to use Coub? You can use Coub in 4 simple steps. Step 1. Open Coub video playlist from Youtube. Step 2. Load the video, press Ctrl+1 and click "Fill" to start.

Step 3. Your video is now re-compile and play. Step 4. Try Coub to create your youtube videos. If you have any questions or queries, feel free to contact me. Q: Why do I get "Can't install executable when running inside of a virtualbox virtual machine?" I am trying to install a virtualbox image into a virtual box machine. I have done this a few times before but for some reason I am getting the following error. Can't install executable When I run the command through the terminal on my computer, I do not get any errors. I am unsure why I am getting this error. Any thoughts? A: I had the same issue. What worked for me was to do: sudo apt-get purge virtualbox-ose virtualbox-guest-utils virtualbox-guest-dkms sudo apt-get install virtualbox-guest-utils virtualbox-guest-dkms virtualbox-guest-dkms-amd64 Note that these commands were run while I was in the same session as the virtual machine. Q: how to clear a form which contains several input tags? I'm trying to clear a form which contains several input tags.

So far i found some solutions like: `window.location.href="your_page"; $('form').submit(); $('#form-id').children().find('input').each(function(){ $(this).val(""); });` However these methods work only if the input tag is inside a input tag. Example: 82157476af
